

AI Interview Evaluation Report

Candidate	abhay
Section	Generative AI / LLM fundamentals
LLM	Ollama (Local) / llama3.2:1b
Status	completed
Overall Score	3.8/10
Questions Attempted	5

Question 1: What is an LLM, and how does it work?

Candidate Answer: A Large Language Model (LLM) is a type of artificial intelligence program designed to read, write, and understand human language.

Score	4.0	Correctness		Completeness	
Depth	7.0	Clarity		Response Time	41.91254234313965

Feedback:

Question 2: What is a Transformer architecture?

Candidate Answer: a deep learning design introduced in the 2017 paper "Attention Is All You Need". It processes entire sequences of data in parallel using self-attention mechanisms rather than step-by-step loops, powering modern AI systems like ChatGPT, Gemini, and Llama

Score	3.0	Correctness		Completeness	
Depth	5.0	Clarity		Response Time	46.74087643623352

Feedback:

Question 3: Explain attention and self-attention.

Candidate Answer: Attention is a neural network technique that lets a model dynamically focus on specific parts of an input sequence when generating an output. Self-attention is a specialized type of attention where a single sequence relates to and evaluates different parts of itself to build rich, context-aware representations for every word simultaneously

Score	4.0	Correctness		Completeness	
Depth	7.0	Clarity		Response Time	56.55632472038269

Feedback:

Question 4: What are tokens, embeddings and context windows?

Candidate Answer: Tokens are small chunks of text (words or parts of words) that AI models read. Embeddings turn those text pieces into lists of numbers that capture meaning. A context window is the maximum memory limit of input and output tokens an AI can handle at one time

Score	4.0	Correctness		Completeness	
Depth	5.0	Clarity		Response Time	165.00498604774475

Feedback:

Question 5: What is the difference between GPT, Llama and Claude?

Candidate Answer: GPT, Llama, and Claude are leading large language models created by different organizations. GPT (by OpenAI) is a versatile, closed-source model known for fast general reasoning; Claude (by Anthropic) is a closed-source model focused on safety, coding, and long text analysis; and Llama (by Meta) is an open-source model designed for custom, self-hosted deployment.

Score	4.0	Correctness		Completeness	
Depth	7.0	Clarity		Response Time	24.127981662750244
