

AI Interview Evaluation Report

Candidate	ada
Email	abhay0005@gmail.com
Target Role	AI
Experience	15
Section	Generative AI / LLM fundamentals
LLM	Ollama (Local) / llama3.2:1b
Status	completed
Overall Score	2.4/10
Overall Feedback	The candidate showed a foundation that needs further preparation (overall score: 2.4/10). Focus on deepening understanding of LLM fundamentals and practical applications.
Questions Attempted	5

Question 1: What is an LLM, and how does it work?

Candidate Answer: A Large Language Model (LLM) is a type of artificial intelligence program designed to read, write, and understand human language. It works as an advanced statistical prediction machine, processing text by breaking it down into small pieces and repeatedly guessing the most likely next word in a sequence using deep learning and neural networks.

Score	4.0	Correctness		Completeness	
Depth	6.0	Clarity		Response Time	6.955424070358276

Feedback:

Question 2: What is a Transformer architecture?

Candidate Answer: The transformer architecture is a deep learning design introduced in the 2017 paper "Attention Is All You Need". It processes entire sequences of data in parallel using self-attention mechanisms rather than step-by-step loops, powering modern AI systems like ChatGPT, Gemini, and Llama.

Score	2.0	Correctness		Completeness	
Depth	4.0	Clarity		Response Time	29.80342960357666

Feedback:

Question 3: Explain attention and self-attention.

Candidate Answer: Attention and self-attention are core tools in artificial intelligence. Attention lets a model look at specific parts of an input sequence when making a choice. Self-attention is a special type of attention where a sequence looks at its own parts to understand context.

Score	2.0	Correctness		Completeness	
Depth	4.0	Clarity		Response Time	62.426148891448975

Feedback:

Question 4: What are tokens, embeddings and context windows?

Candidate Answer: Tokens are small chunks of text like words or parts of words that AI reads. Embeddings turn those pieces into lists of numbers that capture real-world meaning. Context windows are the maximum total number of tokens an AI model can remember and process at any one time.

Score	2.0	Correctness		Completeness	
Depth	3.0	Clarity		Response Time	20.874368906021118

Feedback:

Question 5: What is the difference between GPT, Llama and Claude?

Candidate Answer: GPT (by OpenAI), Claude (by Anthropic), and Llama (by Meta) are leading large language models that differ primarily by developer and licensing: GPT is a versatile closed-source model, Claude focuses on advanced coding, nuance, and safety guardrails, and Llama is an open-weights model designed for local hosting and customization

Score	2.0	Correctness		Completeness	
Depth	5.0	Clarity		Response Time	26.25406551361084
